

Hello,

We are college students in a human centered design and interface class at Olin College of Engineering.

As student researchers, we are focusing on helping business people who end up stranded in locations due to layovers or other such delays find local attractions that fit their personal interests. We wish to investigate the way in which current websites guide how this planning takes place and the effort involved in bringing together several hours worth of activities.

We maintain confidentiality of all personal information we collect. Pseudonyms will be used in place of real names and personal information. We may also ask permission for photos or recordings to aid in our design process, and you are under no obligation to comply.

We will work with you in order to identify times that are convenient to meet. Please let us know if any problems arise and we will be eager to do our best to help and work around your schedule.

Please let us know if you approve of these conditions and/or if anything needs to be clarified or modified. Our professor can also be reached with any further questions by email at:

amon.millner@olin.edu

Thank you!
